

Hosted Voicemail Transcription

Improve Ingoing and Outgoing Communication. Instantly Read Voicemails Without Having to Log into your Voicemail System.

Transbeam's Hosted Voicemail Transcription service transcribes your voicemail to text, along with an audio file of the original message, to your email inbox. This service is available to all Transbeam Hosted PBX customers and is a cloud-based service. No software installations are needed.

Hosted Voicemail Transcription service is designed to deliver a reasonable approximation of the voice message. In most cases, users should be able to act on the message without needing to listen to the audio. They can still listen to the original voice message by clicking on the audio attachment if needed.

Hosted Voicemail Transcription is not available for cell phone service. This service only works with Transbeam Hosted PBX service.

Benefits

- ▶ **Fast** – Instantly read your voicemails and scan for important information you are waiting for instead of listening to an entire voicemail message
- ▶ **Efficient and Convenient**
When in meetings glance at that important call you missed and read the voicemail message without interrupting others. When traveling or commuting on mass transit retrieve your voice messages privately without the need for a headset to listen to your messages or the need to wait for voice communication while flying

"We've gotten rave reviews about the new tools that have been provided, especially from our 'power users' in the field, who really appreciate speed and efficiency for both their incoming and outgoing communications. Overall I'd estimate that we have increased productivity of our people in the New York area by at least 15%."
